

10 BENEFITS of Everyware IoT

“Eurotech IoT solution has many features we did not realize we needed until we began the implementation” (Everyware IoT customer)

1 OPEN and Interoperable

Open-source core software to reduce the risk of vendor lock-in and open integration with applications to lower implementation costs

2 INTEGRATED and Modular

Everything needed to get data to cloud (faster time to revenue) with the flexibility of modular IoT stack components

3 MANAGED and Secure

Remote device updates and digital twins to simplify the management of distributed enterprise paired with strong protection against unauthorized access and data snooping

4 IoT EDGE GATEWAYS for any requirements

Certified hardware for many industries and customization through Professional Services

5 FAST and EASY edge-to-cloud prototyping

IoT platforms and edge frameworks to acquire, process and publish data to the cloud in minutes

6 ESF WIRES

No code needed to write edge computing apps: visually wire pre-configured components to simplify communication with field assets and publish data to the cloud

7 IDEAL for green-field and brown-field apps

Update your current architecture or deploy a brand new IoT end-to-end infrastructure

8 ADVANCED edge and cloud analytics

Integration with IT applications and data aggregation through a data management cloud platform

9 EASY to deploy

Build out an IoT environment in nearly any infrastructure, public or private, in a centralized or distributed design

10 BUILDING BLOCKS to enable end-to-end IoT Solutions

Edge-to-cloud components for digital transformation and IT/OT integration
